

Combating breached credentials

Consumers reuse online credentials with alarming frequency. So a stolen set of credentials is likely to work across multiple organizations, possibly even yours.

Criminals use 'credential stuffing' to attempt hundreds of thousands of logins to test stolen credentials. This escalates the urgency to protect your business and your customers.

Credential reuse

81%

of consumers reuse user ID/passwords across multiple online accounts.

Your customer's credentials have likely been stolen.

Compromised credentials

Recognize login attempts coming from the same device.

2.2B
Sets of credentials were exposed in 2018.

Account takeover

50%

of account-takeover attempts occur in the online channel.*

Proactive risk monitoring. The best path to detecting fraud before it occurs.

Protect your customers. Protect your business.

Device intelligence beyond cookies and tags

Real time, strategy-driven, customizable risk models

Expert case management

For credential breaches, like the recent dump of 2.2 billion records, protecting your customers and business must be a top priority. We can help you modernize your fraud prevention strategy to keep pace with fraudsters.

Stop fraud, not good customers.
